PROJECT OVERVIEW

Qdoba Mexican Grill is a restaurant franchise in the United States and Canada offering a style of Mexican cuisine known as “Fresh Mex”. Since its initial opening in 1995, Qdoba has grown to be one of the largest competitors in the market for fast casual Mexican restaurants and now operates over 600 locations throughout the United States alone.

Qdoba teamed up with Parron Hall to renovate their headquarters in Colorado. After looking at several options, they opted for Knoll height adjustable tables. One of the challenges faced was to find a flexible power solution that could accommodate power access from both below and above the work surface as well as manage the multiple cords created by all the devices plugged in at each workstation to create a clean aesthetic.

Working with ECA’s sales rep, Kevin Rodenbeck, the Seclusion Hide It Kit was identified as the ideal solution to address these requirements. The product provided ample power connections that were housed beneath a grommet lid with access above and below the work surface. The Cable Basket attached to the power unit below the work surface, providing the space required to house all the excess cords and other accessories keeping the workstations clean and fulfilling the client’s requirement.

To learn more about this project or similar applications please contact your ECA sales representative or send us a message at sales@electri-cable.com.
