

PROJECT PROFILE

PROJECT OVERVIEW

The University of Illinois is a public university widely regarded as a premier academic institution for its high concentration on research, teaching, and public engagement. In April of 2014, the University sought to renovate their computer labs in order to preserve their status as an educational cornerstone and secure an advantage over other universities competing for prospective students.

Custom tables designed by Pinnacle Wood Products consisted of laminate tops with cutouts for grommets, and full access to power stored in the table base. ECA representative, Corporate Solutions, was asked to recommend a viable power solution with easy access and flexible mounting options.

The Cove Series was chosen for its easily accessible power, data, and USB charging ports at the table top. It's flexible design allows it to be mounted horizontally in tables, and spill resistant receptacles offered the university an added level of safety and peace of mind. The Villa Power Bar was selected as a permanent fixture inside the table base to provide power for stationary computers and devices.
